

Review Session Problem Set

Hello, sports fans. The review session on Wednesday, January 12th, from 3-5 PM will cover the topic of organic synthesis. All material will be presented in the context of problem solving. In addition to a review of key reactions and transforms, retrosynthetic analysis, problem solving strategy, protecting strategy, and common errors to avoid will be discussed. The four problems below will be worked out in the second half of the review. You may wish to try your hand at them ahead of time. Yes, I know they're very easy, but please try to limit your anonymous complaints to 150 words or less. Thanks.

— Your ol' buddy, Paul
