# CHEM 2410 - Organic Chemistry 1 - Fall 2016 

## Hour Examination "4

Wednesday, November $30^{\text {th }}, 2016$
6:10-8:10 p.m. in the Lecture Halls at Saint Louis University

| Student Name (Printed) |  |
| :--- | :--- |
| Student Signature |  |

## Instructions \& Scoring

- Please write your answers on the official answer sheet. No answers marked in this booklet will be graded.
- You may use one letter-sized sheet of handwritten notes (on the "official" template) and your plastic model kit. The only electronic resource permitted is a TI-30XA, TI-30XIIS, or TI-30XS calculator.
- You may not communicate with others.
- Your exam answer sheet may be copied or scanned. The examination room may be photographed or videotaped.

| Problem | Points <br> Earned | Points <br> Available |
| :---: | :---: | :---: |
| I |  | 66 |
| II |  | 4 |
| III |  | 9 |
| IV |  | 9 |
| V |  | 12 |
| TOTAL |  | 100 |

This exam focuses on Chapters 12, 13, and 14 in Janice Smith's Organic Chemistry, $4^{\text {th }}$ ed.

Problem I. Multiple Choice ( 66 points total). Correct answers score +3 points, answers of ' $E$ ' score +1 point, and incorrect answers score 0 points. For each question, select the best and most complete answer of the choices given. Bubble the answer, darkly, in the space provided on the answer sheet.
(1) Which of the following statements is correct?
(A) a compound with a chemical shift of 7.20 ppm collected on a 300 MHz NMR spectrometer will also have a chemical shift of 7.20 ppm on a 700 MHz spectrometer
(B) carbon atoms with six protons and six neutrons are NMR active
(C) peaks observed in IR spectroscopy represent electronic transitions between molecular orbitals
(D) the alignment of nuclear spin against an external magnetic field is lower-in-energy than alignment with the external magnetic field
(2)

Which of the following compounds would give rise to a ${ }^{13} \mathrm{C}$ NMR spectrum with six signals?

(A)

(B)

(C)

(D)
(3) $\qquad$ Two of the sixteen hydrogen atoms in compound $\mathbf{A}$, cyclooctane, are drawn explicitly below. What is the multiplicity of the signal corresponding to the drawn hydrogen atoms?

A
(A) singlet
(B) doublet
(C) triplet
(D) triplet of triplets
(4) $\qquad$

B $\xrightarrow[\text { pyridine }]{\mathrm{POCl}_{3}}$
c $\xrightarrow{\mathrm{Br}_{2}}$
D

(A)

(B)

(C)

(D)
(5) Which of the following compounds is most easily distinguished from the other molecules using mass spectrometry as the sole analytical technique?

(A)
(B)
(C)
(D)
$\qquad$ What changes would be expected in the IR spectrum of the reaction mixture if ethanol were treated with pyridinium chlorochromate (PCC)?

IR Spectrum of ethanol:

Source: Spectral Database for Organic Compounds, \#1300
(A) the disappearance of the broad peak at $3358 \mathrm{~cm}^{-1}$ and the appearance of an intense peak at $1727 \mathrm{~cm}^{-1}$
(B) the disappearance of the broad peak at $3358 \mathrm{~cm}^{-1}$ and the appearance of a very broad peak from $2500-3500 \mathrm{~cm}^{-1}$
(C) the disappearance of the peak at $2974 \mathrm{~cm}^{-1}$ and the appearance of an intense peak at $1715 \mathrm{~cm}^{-1}$
(D) the disappearance of the peak at $2974 \mathrm{~cm}^{-1}$ and the appearance of a sharp peak at $2254 \mathrm{~cm}^{-1}$
(7)

MCHM is a chemical used to wash coal of materials whose presence would contribute to increased pollution during combustion. In 2014, a large quantity of MCHM leaked from a holding tank into the ground by the Elk River in West Virginia, rendering the tap water in the city of Charleston undrinkable. MCHM has 1 degree of unsaturation $(\Omega=\operatorname{RAPB}=1)$ and a molecular ion at $\mathrm{m} / \mathrm{z} 128$. Which of the following is the molecular formula of MCHM?
(A) $\mathrm{C}_{6} \mathrm{H}_{8} \mathrm{O}_{3}$
(B) $\mathrm{C}_{7} \mathrm{H}_{12} \mathrm{O}_{2}$
(C) $\mathrm{C}_{8} \mathrm{H}_{16} \mathrm{O}$
(D) $\mathrm{C}_{6} \mathrm{H}_{15} \mathrm{~N}_{3}$
(8) $\qquad$ Which of the following compounds will have a signal in its ${ }^{1} \mathrm{H}$ NMR spectrum in DMSO- $d_{6}$ disappear upon the addition of deuterated water $\left(\mathrm{D}_{2} \mathrm{O}\right)$ to the sample?

(A)

(B)

(C)

(D)
(9)
$\qquad$ Compound $\mathbf{F}$ is 18 -annulene, an aromatic compound with $18 \pi$ electrons, has a similar response to benzene in the presence of an applied magnetic field. The ${ }^{1} \mathrm{H}$ NMR spectrum of $\mathbf{F}$ has two signals: $\delta 8.9 \mathrm{ppm}$ and $\delta-1.8 \mathrm{ppm}$. Which of the following statements is not true of compound $\mathbf{F}$ ?

F
(A) the protons inside the ring are shielded compared to the protons outside of the ring
(B) there are two unique sets of protons in the molecule
(C) the induced magnetic field opposes the external field in the vicinity of protons outside the ring
(D) the IR spectrum will have stretches around $3100 \mathrm{~cm}^{-1}$
(10)

Which of the following sequences of reactions is the best choice to convert $\mathbf{G}$ to $\mathbf{H}$ ?

(A)

(B)

$$
\xrightarrow[\text { pyridine }]{\mathrm{TsCl}} \xrightarrow[\text { DMSO }]{\mathrm{NaSCH}_{3}}
$$

(C)

$$
\xrightarrow[\mathrm{H}_{2} \mathrm{O}]{\mathrm{H}_{2} \mathrm{SO}_{4}} \xrightarrow[\mathrm{H}_{2} \mathrm{SO}_{4}]{\mathrm{CH}_{3} \mathrm{SH}}
$$

(D)

(11) $\qquad$ Which of the following compounds will have the most signals in its ${ }^{1} \mathrm{H}$ NMR spectrum?

(A)

(B)

(C)

(D)
(12) $\qquad$ Which set of $m / z$ values below represents significant peaks in the electron-impact mass spectrum of compound J?

J
(A) $57,43,20$
(B) $85,57,43$
(C) $100,85,20$
(D) $102,100,85$
(13) $\qquad$ How many signals (arising from sets of inequivalent protons) appear in the ${ }^{1}$ H NMR spectrum of compound K. Hint: Be careful!

K
(A) 6 signals
(B) 7 signals
(C) 8 signals
(D) 9 signals
(14) $\qquad$ What is compound $\mathbf{M}$, the major product of the following sequence of reactions?

(A)

(B)

(C)
(D)
(15)

Rank the labeled carbon atoms in order of increasing chemical shift (from lowest to highest value) in the ${ }^{13} \mathrm{C}$ NMR spectrum of compound $\mathbf{N}$.

N
(A) I $<$ II $<$ III
(B) I $<$ III $<$ II
(C) II $<$ III $<$ I
(D) II $<$ I $<$ III
(16) $\qquad$ Compound $\mathbf{P}$ is a sweet-smelling organic liquid that was once used as an anesthetic for medical procedures and to extract caffeine from coffee beans. These uses have largely been phased out due to the identification of $\mathbf{P}$ as a health hazard and carcinogen (a compound that causes cancer) by the European Union and U.S. Environmental Protection Agency. Compound $\mathbf{P}$ is composed solely of carbon, hydrogen, and chlorine atoms. Given its mass spectrum below, which includes the molecular ion of $\mathbf{P}$, identify how many chlorine atoms are present in the compound.

El Mass Spectrum of Compound $\mathbf{P}$ :

Source: Spectral Database for Organic Compounds, \#2151 http://sdbs.db.aist.go.jp/

| $\mathbf{m} / \mathbf{z}$ | Relative Intensity |
| :---: | :---: |
| 130 | 100.0 |
| 131 | 2.4 |
| 132 | 96.3 |
| 133 | 2.1 |
| 134 | 30.2 |
| 136 | 3.2 |

(A) one chlorine atom
(B) two chlorine atoms
(C) three chlorine atoms
(D) four chlorine atoms
(17) $\qquad$ Which of the following species does not correspond to a peak in the electron-impact mass spectrum of 1-hexanol ( $\mathbf{Q}$ )?

Q

El Mass Spectrum of Compound $\mathbf{Q}$ :

Source: Spectral Database for Organic Compounds, \#1303
http://sdbs.db.aist.go.jp/

(A)
$\mathrm{H}_{2} \stackrel{+}{\mathrm{C}}^{-\mathrm{OH}}$
(B)

(C)

(D)
(18) $\qquad$ The IR spectrum below corresponds to which of the following compounds?

Source: Spectral Database for Organic Compounds, \#2837
http://sdbs.db.aist.go.jp/

(A)

(B)

(C)

(D)
(19) $\qquad$ Signals from the ${ }^{1} \mathrm{H}$ NMR spectrum of acrylonitrile $(\mathbf{R})$ are shown below. Which signal corresponds to the $\mathrm{H}_{\mathrm{a}}$ proton? The coupling constants are $\mathrm{J}_{\mathrm{ab}}=11.8, \mathrm{~J}_{\mathrm{ac}}=18.0 \mathrm{~Hz}$, $J_{\mathrm{bc}}=0.9 \mathrm{~Hz}$. Assume the scale of the x -axis is the same for each peak.

Adapted from: Organic Chemistry, $5^{\text {th }}$ edition, by Janice G. Smith
(A) the resonance for the $\mathrm{H}_{\mathrm{a}}$ proton is at $\delta 5.7 \mathrm{ppm}$
(B) the resonance for the $\mathrm{H}_{\mathrm{a}}$ proton is at $\delta 6.2 \mathrm{ppm}$
(C) the resonance for the $\mathrm{H}_{\mathrm{a}}$ proton is at $\delta 6.6 \mathrm{ppm}$
(D) insert amusing incorrect answer here that the students will all enjoy, and hopefully, not pick.
(20) $\qquad$ Which of the following compounds is consistent with the ${ }^{1} \mathrm{H}$ NMR spectral data given below?

| Chemical Shift <br> (ppm) | Multiplicity | Integration |
| :---: | :---: | :---: |
| 7.14 | doublet | 4 |
| 7.07 | doublet | 4 |
| 2.92 | septet | 2 |
| 2.46 | singlet | 6 |
| 1.32 | doublet | 12 |

Source: Computer simulation

(A)

(B)

(C)

(D)
(21) $\qquad$ Which of the following compounds is consistent with the proton-decoupled ${ }^{13} \mathrm{C}$ NMR spectrum shown below? (Note: all peaks are singlets.)

Source: Spectral Database for Organic Compounds, \#1678 http://sdbs.db.aist.go.jp/

(A)

(B)

(C)

(D)
(22) $\qquad$ Which of the following sequences will carry out the conversion of $\boldsymbol{S}$ to $\mathbf{T}$ ?

S

T
(A) 1. $\mathrm{OsO}_{4} ; 2 . \mathrm{NaHSO}_{3}, \mathrm{H}_{2} \mathrm{O}$
(B) 1. mCPBA; 2. catalytic $\mathrm{H}_{2} \mathrm{SO}_{4}, \mathrm{H}_{2} \mathrm{O}$
(C) 1. mCPBA; 2. catalytic $\mathrm{NaOH}, \mathrm{H}_{2} \mathrm{O}$
(D) both (B) and (C) will carry out this conversion
(23)

If the year in which Lancastrian King Henry V won decisive victory over the French at the Battle of Agincourt were an IR absorption in units of $\mathrm{cm}^{-1}$, which of the following modes would most likely correlate to the absorption?
(A) $\mathrm{N}-\mathrm{H}$ stretching
(B) $\mathrm{C}=\mathrm{O}$ stretching
(C) $\mathrm{C} \equiv \mathrm{N}$ stretching
(D) $\mathrm{CH}_{2}$ bending

Note: This question is just for kicks. Any answer, including leaving it blank, will not affect your score. But we did promise in lecture to ask about the Battle of Agincourt...

Problem II. Explanation (4 points). Greenhouse gases absorb IR radiation and trap heat in our atmosphere. This process is necessary for our existence-without it, the Earth would cool too rapidly. The enhanced greenhouse effect occurs when molecules are added to our atmosphere that causes it to be too hot. The main gases that compose our troposphere are nitrogen, oxygen, carbon dioxide, water vapor, and argon. Circle below which of these gases in our atmosphere are greenhouse gases and explain what physical property makes them greenhouse gases in one sentence.
$\begin{array}{lllllll}\text { Circle the greenhouse gases: } & \mathrm{N}_{2} & \mathrm{O}_{2} & \mathrm{CO}_{2} & \mathrm{H}_{2} \mathrm{O} & \mathrm{Ar}\end{array}$

One-sentence explanation:

Problem III. (9 points) Roadmap Problem. Provide structures for compounds V, X, and $\mathbf{Y}$ consistent with the information provided below.

Compound $\mathbf{U}$ is the alcohol drawn below. Treatment of $\mathbf{U}$ with sulfuric acid in the absence of water yields compound $\mathbf{V}$ as a product that distills out of the reaction mixture. Compound $\mathbf{V}$ displays no strong, broad absorption in the IR around $3300 \mathrm{~cm}^{-1}$ and no significant absorption near $1700 \mathrm{~cm}^{-1}$. Its electron-impact mass spectrum has a molecular ion peak at $\mathrm{m} / \mathrm{z} 84$. Treatment of $\mathbf{V}$ with cold, dilute, basic potassium permanganate yields $\mathbf{X}$ as the major product. Compound $\mathbf{X}$ has an intense, broad absorption in the IR around $3300 \mathrm{~cm}^{-1}$. Its ${ }^{1} \mathrm{H}$ NMR spectrum has two signals: $\delta 2.40,1.23$, with an integration ratio of 1:6. When $\mathbf{X}$ is treated with a catalytic amount of sulfuric acid, it is converted to compound $\mathbf{Y}$ in high yield. $\mathbf{Y}$ has a molecular ion of $m / z 100$. Its ${ }^{1} \mathrm{H}$ NMR spectrum has two signals and its ${ }^{13} \mathrm{C}$ NMR spectrum has four signals. The IR spectrum for $\mathbf{Y}$ has a strong absorption at $1710 \mathrm{~cm}^{-1}$, but no significant peaks above $3000 \mathrm{~cm}^{-1}$.

compound $\mathbf{U}$

$$
\downarrow \mathrm{H}_{2} \mathrm{SO}_{4}
$$

v

$\mathrm{KMnO}_{4}, \mathrm{NaOH}$, $\mathrm{H}_{2} \mathrm{O}$ (cold)

- Electron-impact MS has $\mathrm{M}^{+}$peak of $\mathrm{m} / \mathrm{z} 84$
- Does not have IR absorption band near $1700 \mathrm{~cm}^{-1}$
- Does not have the strong, broad IR absorption around $3300 \mathrm{~cm}^{-1}$
- ${ }^{1} \mathrm{H}$ NMR spectrum has one signal, at $\delta 1.64$
- ${ }^{13} \mathrm{C}$ NMR spectrum has two signals: $\delta 123,20$
- Intense, broad IR absorption near $3300 \mathrm{~cm}^{-1}$
- ${ }^{1} \mathrm{H}$ NMR spectrum has two signals: $\delta 2.40,1.23$ with an integration ratio of 1:6

- Electron-impact MS has $\mathrm{M}^{+}$peak of $\mathrm{m} / \mathrm{z} 100$
- Strong IR absorption at $1710 \mathrm{~cm}^{-1}$
- No strong absorptions above $3000 \mathrm{~cm}^{-1}$
- ${ }^{1} \mathrm{H}$ NMR spectrum has two signals
- ${ }^{13} \mathrm{C}$ NMR spectrum has four signals: $\delta 214,44,26,25$

Problem IV. Synthesis ( 9 points). Provide a synthetic route-i.e, a sequence of reactions-to produce 1-methoxyoctane (AA) from 5-hexyne-1-ol (Z) and any other starting materials or reagents you need that contain three carbon atoms or fewer.

Problem V. Assignment of an NMR Spectrum (12 points). High-resolution mass spectral analysis of a pure sample of compound $\mathbf{B B}$ reveals it to have a molecular formula of $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}$. The ${ }^{1} \mathrm{H}$ NMR spectrum of $\mathbf{B B}$ in $\mathrm{CDCl}_{3}$ has the following signals:

Source: Spectral Database for Organic Compounds, \#23514
http://sdbs.db.aist.go.jp/

| Chemical Shift <br> (ppm) | Multiplicity | Integration |
| :---: | :---: | ---: |
| 2.62 | septet | 6 |
| 2.48 | quartet | 11 |
| 1.10 | doublet | 37 |
| 1.04 | triplet | 19 |

In the space provided on your official answer sheet:
(i) (4 points) Draw a Lewis structure for compound BB consistent with the data provided above.
(ii) (8 points) For each chemical shift, draw an arrow pointing to one of the hydrogens that gives rise to that signal.

## Please Make Sure to Do the Following After Completing Your Exam

1. Ensure that all of your selected circles are darkened completely.
2. Submit your answer sheet, exam booklet, and scratch paper to the proctors. You may not remove these items from the exam room.
3. Turn in your note sheet with your name and Banner ID written clearly in the appropriate space. Your note sheet will be returned to you on Monday.

## Scratch Paper

You may rip this sheet out of the exam booklet, but you are responsible for turning it in at the end of the exam.
